Author Index

de France, G.	The influence of the non-linear stiffness behaviour of rail pads on the track component of rolling noise	233–241
Dong, R.	Idealized steady state interaction between railway vehicle and track	15–29
Ducruet, C.	Inviscid fluid flow around high-speed trains passing by in open air	105–116
Dukkipati, R. V.	Idealized steady state interaction between railway vehicle and track	15–29
Dukkipati, R. V.	Performance of a rail car equipped with independently rotating wheelsets having yaw control	31–38
Dukkipati, R. V.	A parametric study of the lateral stability of a rail bogie on a roller rig	39–47
El Abdi, R.	Coupled effect between damage and elastoviscoplasticity of type 28CrMoV5-08 steel under complex loading	221–231
Ghosh, S.	Fundamental issues in intelligent transportation systems	125–131
Gullers, P.	Full-scale railway wheel flat experiments	1–13
Hardy, A. E. J.	Noise from railway bridges	161–172
Hardy, A. E. J.	Railway passengers and noise	173–180
Horgan, D. J.	Vertical transportation in modern metro stations	63–67
Howe, M. S.	Review of the theory of the compression wave generated when a high-speed train enters a tunnel	89–104
Jergéus, J.	Full-scale railway wheel flat experiments	1–13
Jones, C. J. C.	The influence of the non-linear stiffness behaviour of rail pads on the track component of rolling noise	233–241
Karlsson, B.	Full-scale railway wheel flat experiments	1–13
Lilley, D. M.	Train-generated sound within an underground light railway system	211–220
Lu, G.	Collision behaviour of crashworthy vehicles in rakes	143–160
Lundén, R.	Full-scale railway wheel flat experiments	1–13
Luo, Y.	A model for predicting the effect of temperature force of continuous welded rail track	117–124
Narayanaswamy, S.	Performance of a rail car equipped with independently rotating wheelsets having yaw control	31–38
Nielsen, J. C. O.	Enhancing freight railways for 30 tonne axle loads	255–263
Odenmarck, C.	Full-scale railway wheel flat experiments	1–13
Pollard, M. G.	Tyre fracture: the problem, the causes and preventative action	181–195
Reinhardt-Piéchowiak, A.	Inviscid fluid flow around high-speed trains passing by in open air	105–116
Reinke, P.	Estimation of train resistance coefficients in tunnels from measurements during routine operation	71–87
Sotkovszki, P.	Full-scale railway wheel flat experiments	1–13
Stensson, A.	Enhancing freight railways for 30 tonne axle loads	255–263
Stichel, S.	On freight wagon dynamics and track deterioration	243–254
Thompson, D. J.	The influence of the non-linear stiffness behaviour of rail pads on the track component of rolling noise	233–241
Topp, H. H.	Innovations in tram and light rail systems	133–141
Vardy, A. E.	Estimation of train resistance coefficients in tunnels from measurements during routine operation	71–87
Webber, B.	Class 323 electric multiple units	49–62
Wu, T. X.	The influence of the non-linear stiffness behaviour of rail pads on the track component of rolling noise	233–241
Zboiński, K.	The importance of imaginary forces and kinematic-type non-linearities for the description of railway vehicle dynamics	199–210
